Method and limitations

- Plates are read by pretrained open-source models (YOLOv9 plate detector, cct-s-v2 OCR) running locally on CPU. No video frame leaves the deployment and no external API is used in the detection or alerting path.
- Each row is one vehicle pass, not one frame: reads are aggregated across a vehicle's track by confidence-weighted per-character voting, then validated against Indian plate grammar.
- The sandbox catalogue publishes only camera id and name. Coordinates are resolved by hand-verification or OpenStreetMap geocoding and each camera records which method was used; they are approximate site locations, not a surveyed asset register.
